At Vertec we are continuously measuring to improve, and have added the following:-

December 2013

Vertec to use Bioseal for healthcare products

We are going to use a Bioseal when requested on brochures on coated stocks this will kill 99.99 Germs, this means your products will safe enough to be used around people with weak Immune Systems.

Bioseal is a biocide that involves micro-particles in a resin. The particles are harmless and dormant until touched, at which point they kill harmful bacteria including MRSA and E. coli.

Vertec opts for Agfa Avalon N8 to boost green credentials printweek.com, 14 July 2010

Vertec Printing Services has bought an Agfa CTP system in a bid to enhance its environmental performance. The £70,000 Avalon N8 fully-automated platesetter images 28 Azura TS chemistry-free plates per hour.

Production manager Colin Gilham said the kit, running Agfa's Apogee workflow, was another string to its environmental bow alongside FSC and Carbon Smart accreditations. Vertec produces around 1,100 plates per month for 10-colour and five-colour Komori presses.

Carbon Smart Award

Vertec Printing Services handed Carbon Smart award

Helen Morris, printweek.com, 29 June 2010

Vertec Printing Services has boosted its environmental certifications after being awarded the Carbon Smart award.

Being Carbon Smart means taking an intelligent and flexible approach to reducing your carbon footprint. Carbon Smart status certifies the practical actions we have taken to actively reduce our environmental impact. It clearly demonstrates our commitment to customers, staff and suppliers."
